

ROHAN SHEKAR

(412) 612-3361 | rshekar@andrew.cmu.edu | linkedin.com/in/rohan-shekar | roshekar13.github.io

EDUCATION

Carnegie Mellon University

Bachelor of Science in Artificial Intelligence & Computer Science, minor in Business Analytics

Pittsburgh, PA

Aug 2024 - May 2028

- **Coursework:** ML, Gen AI, Probability, Imperative/Functional Programming, Distributed Systems, ML & Business Analytics
- **Cumulative GPA:** 3.5/4.0; **Clubs:** ScottyLabs (Innovation & Dev Team), Sports Analytics, Pickleball

WORK EXPERIENCES

AI Engineering Intern

Eton Solutions LP

May 2026 – Present

Morrisville, NC

- Building an end-to-end document intelligence workflow at a **\$1.4T AUM** wealth management and ERP firm; automating document classification and data extraction as part of a firm-wide **data monetization** initiative.
- Engineering an AI-powered pipeline integrating **REST/MCP** ingestion, Azure Document Intelligence extraction, and multi-provider LLM classification; built to scale up to **3.1M** financial documents of varying types.
- Connecting pipeline to the firm's existing system of record. Applying AI-driven multi-field matching to verify extracted document against stored ledger entries; eliminating the human-in-the-loop bottleneck at scale.

Software Engineering Intern

Arohi Asset Management

May 2025 – Aug 2025

Singapore, SG

- Developed a fully integrated multivariate regression optimizer to quantify crowding in financial markets.
- Built a crowding-detection model across **8** tickers and **10** years of weekly data using **SLSQP**-optimized factor scoring and **OLS** regression, using *pandas* and *SciPy* to process large-scale datasets.
- Delivered actionable insights and improved idea generation by **10%**. Awarded **bonus letter** by founder at project completion.

PROJECTS

HomeRunAlpha (MLB Market Prediction Model) | Python, PyTorch, Temporal GNNs, XGBoost

May 2026 – Present

- Built an ML system mining predictive edge over sports betting markets by training a temporal **GNN** (GRU player-form + graph message-passing) on **2M+** event records from 4 APIs, beating an XGBoost baseline across all targets (**AUC 0.60** → **0.64**).
- Deployed a live inference service integrating MLB Stats and Polymarket **APIs**, converting market odds into probabilities and retraining the GNN on realized outcomes to calibrate it for deployment.

OpenFolio (Portfolio Analytics & Insights) | TypeScript, React, MongoDB, Gemini API

May 2025 - Present

- Built a full-stack equity portfolio app with TypeScript/Express + MongoDB backend and **React 18/Vite SPA** featuring live Yahoo Finance quotes, Recharts dashboards, and CSV bulk import.
- Integrated **Gemini API** for AI-powered portfolio analytics and ideation, with persistent report history and PDF export.
- In active use tracking **2M+** in real, multi-account assets, delivering personalized capital analytics on live data.

CMU Hive (Full-Stack Web Development) | NodeJS, TypeScript

Aug 2024 – Jun 2025

- Developed CMU Hive, a centralized hub with a custom overlay and interface, scoped for CMU's **7000+** undergraduates to provide convenient access to university-related applications.
- Implemented the front end using **React.js** and **HTML**, handling all interface components and routing logic.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, SQL, HTML, CSS, VBA, SML

Frameworks: PyTorch, TensorFlow, Scikit-Learn, Pandas, React.js, Node.js, OpenCV

Tools: Git, Azure, MongoDB, Excel, VSCode, PyCharm

Protocols: REST, MCP

EXTRACURRICULARS & LEADERSHIP

- **President**, Singapore Students' Association (2025-26); **Head Tutor**, PLUS Tutoring (2025-Present)
- **Corporal First Class**, Singapore Armed Forces; **Advanced Certified Diver**; **ABRSM Grade 5** Music Theory
